FOREWORD

I on behalf of the Ministry of Agriculture and Livestock is pleased to bring out the Bhutan Agriculture and Livestock Statistics (BALS) 2023 (formerly Bhutan RNR Statistics). It is a comprehensive and systematic compendium of the relevant statistics in the domain of Agriculture and Livestock

The BALS 2023 is expected to serve as the major source of information for planners, policymakers, researchers, and academicians. The statistics presented are compiled based on the information gathered through the statistical surveys and censuses as well as from the administrative data maintained by different agencies and departments under the Ministry of Agriculture and Livestock (MoAL).

The statistics are carefully harmonized and diligently validated by the Policy and Planning Division. The additional features of this year's BALS 2023 include the expenditure and analysis.

This change is aimed at facilitating the readers' insights into medium-term thinking on production, trades, prices, etc. As statistics are compiled from various sources, each statistical table mentions the original source so that the data contributors are duly acknowledged and secondary users may contact the source for any further information.

I would like to sincerely thank the Agriculture Statistics Division of the NSB and all departments/agencies including the dzongkhag RNR sectors for their contributions and support, which made it possible for successful publication. We encourage comments and suggestions from the users of this publication to improve the quality of the statistical information.

This publication will be the official source of information on the Agrifood sector., which we will update annually.

Karma Tshering
Policy and Planning Division
Ministry of Agriculture and Livestock

ACRONYMS

AED	Agriculture Engineering Division
ASD	Agriculture Statistics Division
AEZ	Agro-Ecological Zones
AFS	Annual Financial Statement
AFO	Annual Forestry Statistics
BAFRA	Bhutan Agriculture and Food Regulatory Authority
BAIL	Bhutan Agro Industries Limited
BTS	Bhutan Trade Statistics
CAN	Calcium Ammonium Nitrate
CF	Community Forests
CFM	Centenary Farmers Market
CFMG	Community Forest Management Groups
COTI	Countries Other Than India
DAMC	Department of Agricultural Marketing and Cooperatives
DAP	Diammonium Phosphate
DoA	Department of Agriculture
DoC	Day-old Chick
DoFPS	Department of Forests and Park Services
DoL	Department of Livestock
DPA	Department of Public Accounts
DRC	Department of Revenue and Customs
FCBL	Food Corporation of Bhutan Limited
FMCL	Farm Machinery Corporation Limited
FMU	Forest Management Unit
GDP	Gross Domestic Product
LUPP	Land Use Planning Project
LCMP	Land Cover Mapping Project 2010
LULC	Land Use and Land Cover 2016
LFS	Labour Force Survey

MoAF	Ministry of Agriculture and Forests
MoAL	Ministry of Agriculture and Livestock
MoF	Ministry of Finance
MoLHR	Ministry of Labour and Human Resources
MoDa	Mobile Operational Data Acquisition
NCHM	National Centre for Hydrology and Meteorology
NLCS	National Land Commission Secretariat
NPPC	National Plant Protection Centre
NPRC	National Poultry Research Centre
NRDCL	Natural Resources Development Corporation Limited
NSB	National Statistics Bureau
NSC	National Seed Centre
NWFP	Non-Wood Forest Products
PHCB	Population Housing and Census of Bhutan 2017
PPC	Plant Protection Chemical
PPD	Policy and Planning Division
RNR	Renewable Natural Resources
SYB	Statistical Yearbook of Bhutan
WBI	Wood-Based Industry

CHAPTER 1: PRODUCTION

This chapter presents summary statistics on the harvested area of primary crops, production of crops & dairy products along with the livestock population at the national level. The crop and livestock statistics are based on the agriculture and livestock statistics 2023 conducted by the Agriculture Statistics Division (ASD) under National Statistics Bureau (NSB).

Agriculture farming had remained one of the mainstays of the Bhutanese population depending on agriculture for livelihood. Bhutanese Agriculture Sector has come a long way since the introduction of modern agriculture techniques in the first Five Year Plan, gradually transitioning to commercial production from that of subsistence systems.

With an average farm size of 2.22 acres (PHCB, 2017), most farmers practice subsistence to semi-subsistence integrated farming systems. Despite its small average size, Bhutan's agroecology is diverse with large variations in altitude and micro climatic conditions across the country.

The livestock-keeping households are enumerated on a complete basis, the statistics given are actual totals and not based on estimates. Another important difference from the crop statistics is that the livestock statistical figures include live animal numbers and production from the government farms as well and hence reflect a complete picture of livestock population and production within the country.

Table 1.1.1 Harvested Area Under Cereals (2014-2023) (Value in Acre)

Crop	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023

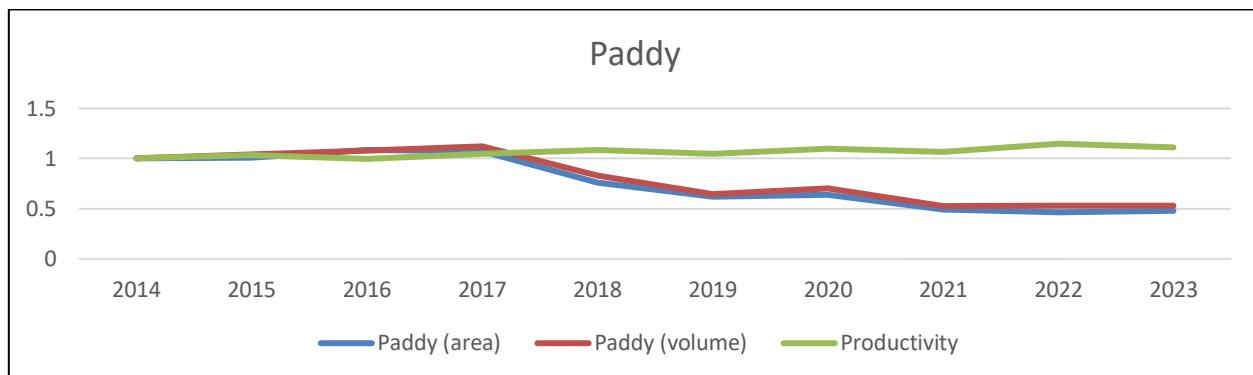

Figure 1: Trends in paddy harvested area, production volume, and productivity, relative to 2013 figures (2014-2023)

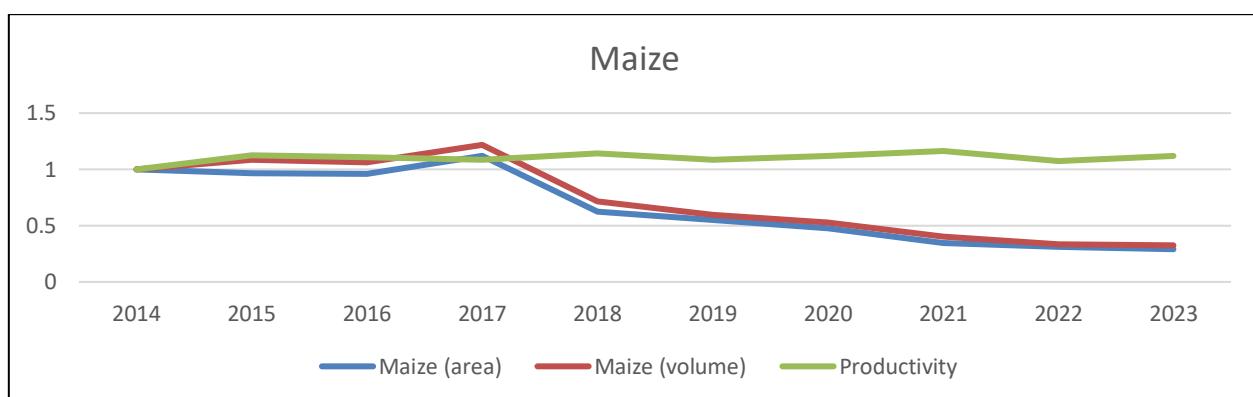

Figure 2: Trends in maize harvested area, production volume, and productivity, relative to 2013 figures (2014-2023)

The major cereal crops grown in the country are paddy and maize. Other cereals include wheat, barley, buckwheat, millet, Amaranthus, and quinoa. The domestic paddy harvested area increased by 2.7% and production decreased by 0.6% in 2023 as compared to that of 2022. The Maize harvested area decreased by 7.0% and production decreased by 3.3% in 2023. Likewise, there is a slight fluctuation in all other crops like vegetables, roots & tuber and fruits, etc. Viewing the ten-year trends in the production area and volume, the trends in both paddy and maize productions show similar trends – both show a slight increase till 2017 followed by a sharp decrease from 2018.

In general, the main reasons for crop reduction are:

1. Due to natural calamities (heavy rainfall during the harvest seasons, hailstorms, frost & wind)
2. Direct and indirect crop damaged by pests (insects, birds & rodents)
3. Due to heavy pruning and die back of the fruit tree
4. New variety less yield
5. Lack of fertilizers and irrigation, and,
6. Farmers leaving farming.

As seen in the figure on “Economically Active Population Employed in Agriculture (2013-2022)” on page 37, the population employed in agriculture decreased by 33% during the decade. In more detail, as seen in the figure “Trends in Labour Force Employed in Agriculture Farming by Age Group (2013-2022)” on page 40, the age group that showed the largest reduction was the 20-29 age group with the reduction rate of 66% compared with a decade ago.

Table 1.2.1 Harvested Area Under Oilseeds (2014-2023) (Value in Acre)

Crop	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023

CHAPTER 2: TRADE

This chapter presents the statistical tables on year-wise import and export of RNR commodities from 2014 to 2023, as per the Bhutan Trade Statistics compiled by the Department of Revenue and Customs (DRC), Ministry of Finance. The import of selected types of farm machinery, fertilizers, and plant protection chemicals are presented separately.

The data on trade is useful for calculating trade balance, food balance sheet, food security, and many other indicators. It can also yield useful information with regard to trends in people's consumption patterns, the country's production capacity, and pointers for policymakers in relation to investment in agriculture and related industries.

CHAPTER 3: LABOUR POPULATION IN AGRICULTURE AND LAND USE

The primary source of data on agriculture farm labour is the Labour Force Survey, which is conducted by the National Statistics Bureau (NSB) annually, and captures the total farm labour on both the male and female in agriculture sector.

Land is one of the most important elements in agriculture and hence the statistics on land and its use is of special interest to the users. Although the figures may be outdated by now, nonetheless owing to lack of any recent land cover mapping efforts, we present in this chapter the figures from LCMP 2010, National Forest Inventory (NFI) 2016, and RNR Census 2019. Additional statistics on government land leasing and private individuals' land conversion, mainly from wetland to dryland category, are also presented. Therefore, in this chapter it includes the statistics on agricultural land area and farming labour involved by the both genders.

One note-worthy trend observed is the decrease of the economically active population employed in agriculture. As seen in the Table 3.2, it showed a 37% decrease over the seven years from 199,640 in 2015 to 125,160 in 2022. A major contributing factor to this trend is a significant decrease of the population in their twenties employed in agriculture (Figure 20). The group ranked second out of six age-groups in 2013 but has been ranking fifth since 2018.

It is also observed that while in 2016 agriculture employed by far the largest share of population out of the three sectors (57.2% in agriculture followed by 34.2% in service sector and 8.7% in industry sector), in 2022 agriculture and service sectors' shares are largely the same: 43.5% in agriculture and 42.8% in service sector, followed by 13.6% in industry sector (Figure 19).

CHAPTER 4: MACHINERY

Mechanization of Bhutanese farming has been given importance since the 1980s and continues to this day. With the trend of young and able-bodied people seemingly leaving the rural farms in search of jobs in towns, the farms in the countryside face labor shortages, and wages have steadily increased, driving the whole production prices up. Farm mechanization is therefore seen as one area that requires major focus.

The major importer of farm machinery was the Agriculture Machinery Centre (AMC) under the MoAL. However, in recent years, a number of private bodies have also entered the scene and play an important role in mechanizing Bhutanese farms. Further, the government in a drive to speed up the farm mechanization process created Farm Machinery Corporation Limited (FMCL), a state-owned enterprise. The job of importing, distributing, hiring, and providing maintenance services which until recently was carried out by AMC is now looked after by FMCL

This Chapter presents the statistics on the number of different types of farm machinery imported, owned by government agencies, and also owned by private individuals for farming purposes in households.

CHAPTER 5: AGRICULTURAL INPUT SUPPLY

Since the inception of the 1st FYP, the ministry has been providing the agriculture inputs such as agrochemicals, seed & seedlings, and green house to all the farming communities in the country to promote the national food sufficiency and security.

The demand of seeds and seedlings were mostly produced in the farms of National Seed Centre and the deficit were produced by the Registered Seed Growers who were the collaborators of NSC. The farmers often depend on agrochemicals (pesticides and fertilizers) to combat pests and diseases, boost productivity, and improve crop quality.

Bhutan may not become totally organic, at least in the near future, but certainly the country is aware of the harmful effects of agrochemical pesticides and therefore strict measures are put in place to control the import and use. No private players are allowed to import agrochemicals due to fear that all kinds of dangerous and/or inferior quality chemicals may

be imported. Only National Plant Protection Centre (NPPC), an agency under Department of Agriculture, MoAF, is mandated to oversee the import and its distribution. From the statistics over the years, one will notice a gradual increase in the quantity of agrochemicals imported and distributed.

This chapter first presents the statistics on import quantity and value of agrochemical imported from 2017 to 2021 based on the data maintained by Bhutan Trade Statistics. It gives an idea of the trend in agrochemical usage. Then we present data on agrochemical distribution by National See Centre and National Plant Protection Centre. One difference between the two sources is that BTS data is by calendar year basis (Jan – Dec) while NPPC&NSC data is by financial year basis (Jul – Jun).

CHAPTER 6: INFRASTRUCTURE

This chapter presents statistics on the state of various production infrastructures such as offices, irrigation canals, farm roads, and electric fencing across the country. These kinds of hardware inputs are crucial in keeping rural farms up and running, combating rural-urban migration and ensuring food self-sufficiency or food security.

The construction of irrigation canals and farm roads is often executed by both central bodies in Thimphu (e.g. by the engineering division of DoA) and the Dzongkhags themselves through funding from various sources, hence compilation of statistics accurately and timely on these infrastructures is quite challenging.

Electric fencing, which has become quite popular as a means to keep wild animals off crops is another input that is executed by several bodies such as NPPC under DoA, various functionaries under DoFPS, various projects, and even NGOs. Private individuals are also known to put electric fencing around their fields. Nonetheless, we present here reliable and updated figures to the best extent possible.

Table 6.1 Agriculture Centres under DoA (2023)

Indicators	As of 31st Mar,2023	As of 30th June,2023	As of 30th Sept,2023	As of 31st Dec,2023
Agriculture extension centres	209	207	207	205

CHAPTER 7: PRICE

Price received by farmers for their produce is an important indicator and therefore this chapter is devoted to price statistics. Price received by farmers means the farm-gate price. The annual agriculture sample survey collects price of products sold by farmers and is a good source. However, for livestock products like milk, meat, eggs and so on, farm gate price data are not available as the annual livestock census does not collect this indicator. Another source of price received by farmers is the auction price of commodities available from FCBL. Auction price is however not farm-gate price as farmers have to bear transportation cost from the villages to the border towns.

Prices for locally produced commodities sold at the Farmers' Centennial Market in Thimphu, collected regularly by DAMC, are also presented to give an idea of the retail prices, which are often several times higher than the prices received by farmers. Price of the imported commodities is also presented and gives further insight into the differential prices occurring.

This chapter also presents price of the various inputs such as seeds, seedling and fertilizers supplied by National Seed Centre. The price charged by NSC are at subsidized rate.

Table 7.1 Average retail price of secondary cereal and pulse products at CFM, Thimphu (2014-2023) (value in Nu.per Kg)

Crop	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023

CHAPTER 8: METEOROLOGY STATISTICS

For agriculture, water is one of the most important natural resources. The main source of water is rainfall which keeps the rivers flowing, lakes filled, and mountains peaks snow-covered or directly supplies moisture to the crops.

This chapter presents data on total and monthly precipitation (in millimeters) at 20 weather stations which are set up and managed by National Centre for Hydrology and Meteorology (NCHM) across the country. The chapter also presents data on temperature and other meteorological items of agricultural significance.

CHAPTER 9: EXPENDITURE

Government expenditure is aimed at delivering outputs like sectoral services to citizens, and the sectoral GDP is an important indicator of the sector's annual overall output. This chapter presents the government's sector-wise expenditures, sector-wise GDPs, and the ratio of the former to the latter, i.e. the sectoral GDP (as output) divided by the sectoral expenditure (as input) for nine years (2013-2021). (As the expenditure figures specific to the secondary and tertiary sectors are not published, all-sectors' figures and the primary-sector's figures are used for comparison. Since Expenditure figures reported in the Statistical Yearbook of Bhutan are organized in the fiscal year and don't synchronize with GDP figures (organized in calendar year), modified Expenditure figures are used. See footnote of Table 9.1 for details.)

The ratios (output/input ratio) obtained for all sectors (Table 9.1) ranged from 2.83 to 3.79 (the average being 3.29), and the ratios for the primary sector ranged from 2.97 to 4.43 (the average being 3.61), which suggests that the primary sector performed as well as, or slightly better than, all-sectors as a whole during 2013-2021 (Figure 41).

Likewise, correlation was tested between sector-wise expenditure and sector-wise GDP (by linear regression analysis) using the same data sets. (Again, only all-sector figures and the primary-sector figures are used.)

As shown in Figure 42 and Figure 43, the slope of 2.366 ($p<0.001$) was obtained for all-sectors, whereas a steeper slope of 3.715 ($p<0.005$) was obtained for the primary sector (crop, livestock and forestry). Here again, the result suggests that the primary sector performed as well as, or slightly better than, all-sectors combined when viewed in Expenditure-GDP ratio.

Table 9.1 GDP (total/primary sector), Government Expenditure (total/primary sector), Modified-Gov. Expenditure (total/primary sector) (Value in Million Nu.) and the GDP/M-Gov. Expenditure ratio (total/primary sector).

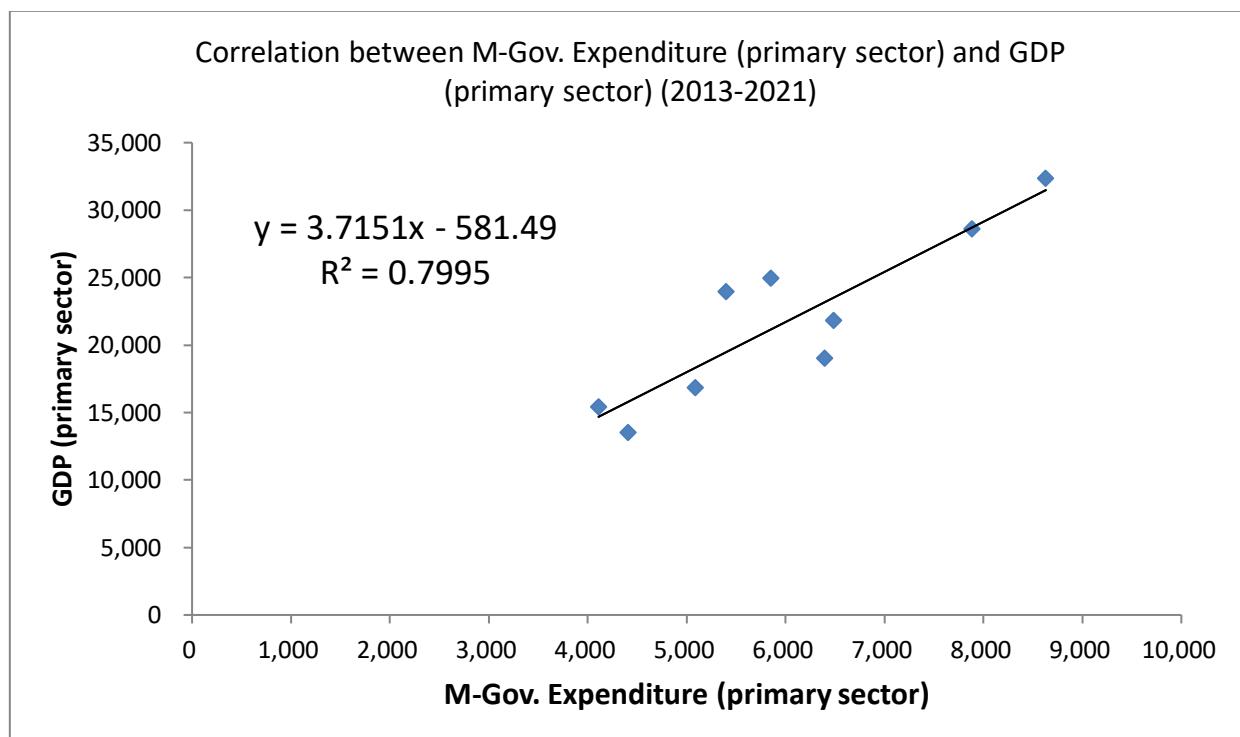

Figure 43:: Correlation between Government Expenditure and GDP (primary sector) (2013-2021)

CHAPTER 10: ANALYSIS

Bhutan's agrifood sector 13th FYP advocates boosting of sectoral GDP (crop and livestock sub-sectors combined) from Nu. 31 billion in 2023 to Nu. 50 billion in 2029. This chapter first presents an analysis to see the feasibility of this scenario. As shown in Table 10.1, achievement of the target in 2029 requires an 8.89% annual growth of the sectoral GDP for seven years (2023-2029). Looking at the recent five years' data (2018-2022), where actual annual agricultural GDP growth rate averaged 9.27%, 8.89% target seems appropriately set (Figure 44).

A second analysis is conducted of the lost area (difference between sown area and harvested area) of selected crops (paddy, maize, potato and cardamom) to see whether the lost area is decreasing. The most recent three years' data (2021-2023) show that paddy and potato saw a decrease in the lost area (Figure 45 and 47). However, looking at five years' data, the lost area largely fluctuated and no clear trend of decrease is observed for all four crops. As for cardamom, the lost area is rather on the increase during that period (Figure 48).

Labour force employed by agriculture sector has decreased since 2015 till now (199,640 to 125,160), while the number has by and large increased for industry sector (30,568 to 39,414) and service sector (114,083 to 123,210). Despite labour force decrease, agriculture sector has constantly increased the sectoral GDP. Now a third analysis is conducted to see how agriculture sector's labour productivity changed over time, along with comparison with other sectors. Table 10.3 shows sectoral GDP, sectoral labour force (employed persons), and sectoral GDP per employed-person (the former divided by the latter). While agricultural labour productivity, viewed in GDP per labour, is small compared with other sectors, the speed of growth it showed over time is significantly faster than other sectors. The agriculture sector's per labour GDP was Nu. 0.071 million in 2013, but it more than tripled to register Nu. 0.267 million in 2022. The speed of growth (of GDP per labour) was slower with industry and service sectors than agriculture sector (Figure 49). The analysis suggests that there is a solid progress in modernization of agriculture in Bhutan.

Table 10.1 Actual and target agriculture GDP at current prices (2018-2029) (Value in Million Nu.)

	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029
Actual agriculture GDP (crop & livestock)	18,903	20,370	23,674	26,996	27,548	31,126	-	-	-	-	-	-
Target agriculture GDP with 8.22% growth	-	-	-	-	-	-	33,685	36,454	39,450	42,693	46,202	50,000

Source: Actual agriculture GDP from National Accounts Statistics 2024, NSB

Note: Annual growth rate 8.22% is required to increase agriculture GDP from Nu. 31.1 billion in 2023 to Nu. 50 billion in 2029.

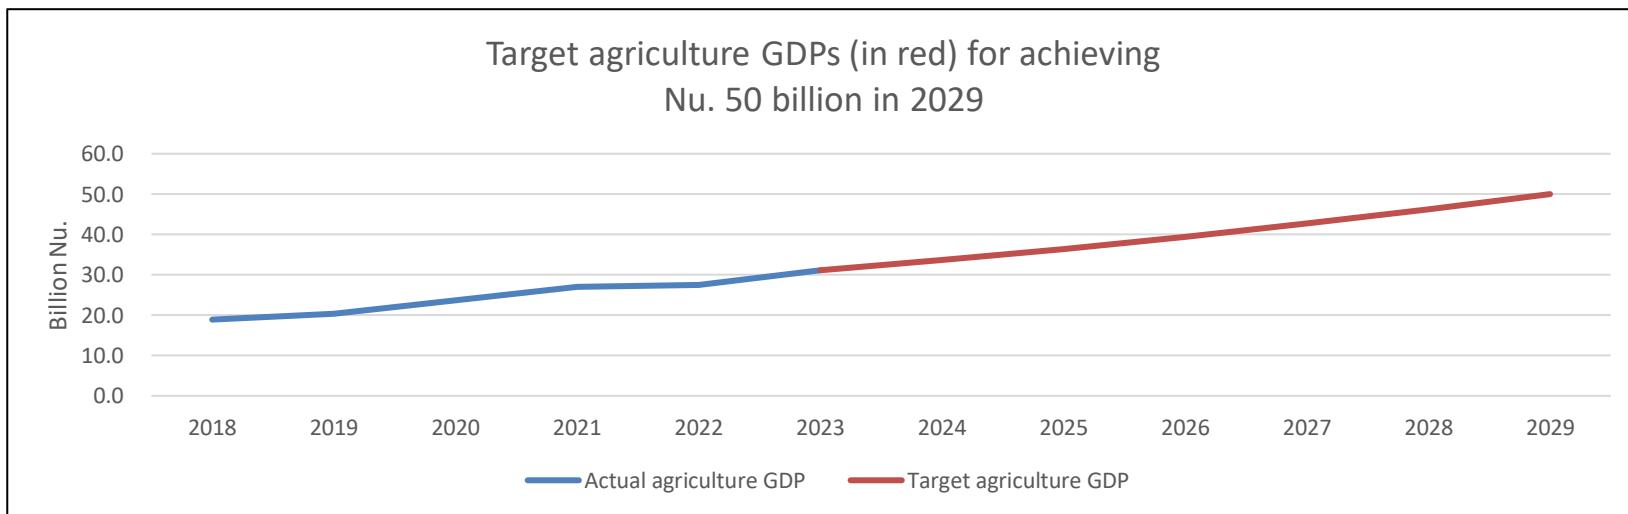

Figure 44:Actual agriculture GDPs and target agriculture GDPs required to achieve Nu. 50 billion in 2029

Table 10.2 Sown area and lost area for selected crops (2019-2023) (Value in Acre and %)

Crop	Sown Area, Lost Area and %	2019	2020	2021	2022	2023
Paddy (irrigated & upland)	Sown area (acre)	32,169	32,217	26,699	23,995	24,557
	Lost area (acre)	1,855	888	2,643	1,313	1,267
	Lost area as % of sown area	5.8	2.8	9.9	5.5	5.2
Maize	Sown area (acre)	37,239	31,813	25,473	21,920	21,031
	Lost area (acre)	4,754	3,868	5,184	3,490	3,890
	Lost area as % of sown area	12.8	12.2	20.4	15.9	18.5
Potato	Sown area (acre)	10,764	10,411	8,825	8,331	8,434
	Lost area (acre)	422	448	581	512	418
	Lost area as % of sown area	3.9	4.3	6.6	6.1	5.0
Cardamom	Sown area (acre)	16,386	13,978	12,813	9,461	10,084
	Lost area (acre)	772	282	1,214	1,465	1,637
	Lost area as % of sown area	4.7	2.0	9.5	15.5	16.2

Table 10.3 Sectoral GDP, sectoral labour force, and sectoral GDP per sectoral employment.

Sector	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
GDP (Million Nu.)										
Primary	13,500	15,381	16,835	19,013	21,819	23,941	24,917	28,596	32,326	33,423
Secondary	44,242	47,996	53,991	60,908	65,879	62,304	63,755	57,894	64,722	72,501
Tertiary	54,365	62,181	67,416	76,155	81,054	90,428	103,976	95,617	107,617	121,890
Labour Force (employed person)										
Primary	189,245	192,369	199,640	198,429	175,859	162,239	159,032	157,015	158,511	125,160
Secondary	32,766	33,635	30,568	30,137	40,960	34,542	43,550	42,438	45,560	39,414
Tertiary	113,861	113,565	114,083	118,564	125,952	103,660	108,478	115,109	118,052	123,210
GDP/employed person (Mill Nu per person)										
Primary	0.071	0.080	0.084	0.096	0.124	0.148	0.157	0.182	0.204	0.267
Secondary	1.350	1.427	1.766	2.021	1.608	1.804	1.464	1.364	1.421	1.839
Tertiary	0.477	0.548	0.591	0.642	0.644	0.872	0.958	0.831	0.912	0.989

Source: National Account Statistics (NAS), NSB; and Labour Force survey Report (LFS), NSB.

Note: 1) LFS counts Mining & Quarrying, Manufacturing, and Construction in the Secondary Sector.

2) Electricity and Water Supply are counted in the Secondary Sector by GDP, but in the Tertiary Sector by LFS.

Table 10.4 Sectoral GDP per sectoral employment (relative to the 2013 figure)

Sector	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
GDP/employed person (relative to 2013 figure)										
Primary	1.000	1.121	1.182	1.343	1.739	2.069	2.196	2.553	2.859	3.743
Secondary	1.000	1.057	1.308	1.497	1.191	1.336	1.084	1.010	1.052	1.362
Tertiary	1.000	1.147	1.238	1.345	1.348	1.827	2.007	1.740	1.909	2.072

Note: This table is created to highlight the fastest growth exhibited by the primary sector in per employment GDP.
